MANUFACTURER

USH SINCE 1976

USH is a company created in 1976. The factory is located in the heart of Germany, close to major German industrial centers of the Ruhr. It has a strong metallurgical experience and from the beginning USH has been specializing in the manufacture of tools for "power-driven tools".

Today USH has become one of the largest bit holder producers in Europe, known for its reliability and strength. The company has developed many models of screwdriver bits and other accessories such as screw extractors and carbide scribers.

USH manufactures its complete range in Germany with special care to create and develop high quality tools.

USH supports customers with a complete product offer, through marketing and merchandising concept suitable for all retail situations.

SYSBOX RANGE

New range screw bits in Sysbox packaging, each family products is represented with specific color codes.

TORSION GEOMETRY

LONG LIFE GARANTY

The **torsion bit is perfectly** suited for bearing load peaks. If, for instance, the screw head makes contact with a solid metal surface, a torsion bit will master this situation without any problem. The load peak is absorbed by the torsion zone, thereby avoiding permanent distortion or deformation of the bit point.

This guarantees a longer tool life. Furthermore, the risk that the bit slips out of the screw head is significantly reduced, and premature wear as well as damage to the workpiece is avoided. **In general, "soft" screw fastening** relates to timber, where fastening starts by applying little force which is then steadily and uniformly increased. The more threads there are, the greater force must be applied. The same applies to plastic, to which, however, in view of the diversity of materials, general rules cannot be applied. Therefore, a standard bit is generally enough. Breaking of the bit point due to sudden load peaks must not be feared. If in "soft applications" the service life has to be increased, greater hardness is more important than the tenacity of the bit. A higher hardness reduces the wear of the bit in the areas where it is attacked, i.e. rounding of edges and indentations in the areas of wear are significantly reduced.

Hard screw fastening relates to the fastening of screws with a metric thread in a solid metal piece but also in metal sheet. The flat underside of the screw head comes into contact with the flat, non-elastic surface of the solid metal piece which results in a sudden load peak. Due to the low torque, which is required for fastening a screw, the different forces, which come into effect are extreme. Another case of "hard" fastening relates to self-tapping screws fastened in a solid metal piece but also in metal sheet. Also in this case, a sudden load peak occurs, but the difference of forces that act on the components is not as extreme as in the application described above. In this case, the advantage of the higher torque, which can be transmitted by the torsion bit, plays an important role.

Furthermore, torsion bits are superior to standard bits when screws have to be fastened into layers of materials with different degrees of hardness, where alternating loads, which are similar to load peaks, are encountered.

HIGH SPEED COLD FORGING

HIGH PRECISION

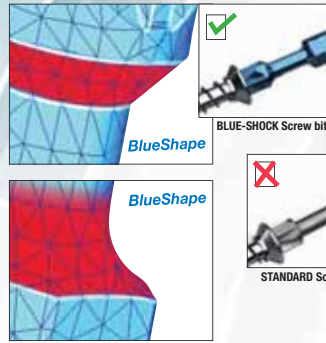

USH uses the self developed **High-Speed-Cold-Forging** process for the manufacturing of screwdrivers. The bits are shaped though a cold forcing process. This manufacturing process gives the bits high precision, greater mechanical strength and a very clean surface condition.

BLUE SHOCK®

INTENSIVE USE

new

BlueShape Anti-Breakage

The flex zone is reinforced on each side for an even stronger link with the head and the attachment and avoid breakages.

BlueFit Precision

PH, PZ, TX perfectly fits screwheads and avoid slipping and destroying head geometry.

BlueRing Reinforcement

A strong ring reinforces the head for an even longer resistance.

BLUE SHOCK

new

BLUE SHOCK®

IMPACT QUALITY

**ABSOLUTE
PROFESSIONAL
QUALITY!**

Features

- Lifetime 12x longer than standard screwbits.
 - Shock absorber : the Blueshock screw bit offers a special design with elongated torsion zone, resisting to high torque and violent impacts . Its hardness suits the most powerfull machines.
 - BlueGuide attachment : 30 mm length for an easy use with or without bitholder.
- Hexa 1/4" DIN 3126 C 6,3 attachment
- High Quality alloyed steel. Made in Germany.
 - Rustproof Blue finishing.

BIT HOLDER BLUE SHOCK

Features

- Zone anti-choc Shock Absorber : the bit holder offers a studied and elongated torsion zone to withstand high torque and violent impact when used on a shock screwdriver for an unmatched service life.
- Blue rust proofing finish.
- Magnetic to allow the manipulation of screws.

ISOTIN® TOP QUALITY

OPTIMUM
SOLUTION FOR
INDUSTRIAL
APPLICATIONS

Features

- Double titanium layer.
- Surface hardness of 3,000 Vickers (standard Tin bit approx. 2,500 Vickers).
- Optimised core toughness and thicker wearing coat for a longer tool life than Tin bits with standard coating.
- Torsion geometry.
- Quick lock attachment.
- Optimum corrosion protection

Benefits

- As a result of the torsional shape, the bit is suitable for all delicate applications in both hard and soft materials.
- ISOTIN® bits for screw fastening series.
- The double titanium cover prevents corrosion and ensures high surface hardness.
- Quick lock attachment for optimum holding in the chuck.
- The torsion geometry combined with the ISOTIN® coating increases the resistance to tightening torque.
- Fully compatible with PL, PH, PZ, TX type screw.

INDUSTRY PRO QUALITY

PROFESSIONAL
SOLUTION
FOR EVERY
COMMON
SCREW
FASTENING

Features

- Quick lock attachment.
- Torsion geometry.
- Standard DIN hardness.
- Sandblasted.
- Rust proof protection.

Benefits

- Bits for classic power drivers.
- Quick lock attachment, optimum hold in the chuck.
- Torsion geometry for higher strength against the tightening torque.
- Fully compatible with PZ, PH, TX, TT, HEX, TPLUS, SL, TS, Ro, XZN, TW type screw.
- Full range with, 25, 50, 70, 90, 110, 125, 150, 200, 250 lengths, reduced shank, double bits...

MORE THAN 1,000 SPECIAL TOOLS FOR OUR CUSTOMER

Standard products are the basics of many companies. Simultaneously, special tools are developed, produced and marketed. The same applies to USH, as very often special products offer solutions for a wide range of users. In the past five years, USH has designed more than 1,000 special tools for their customers, based on a drawing or a sample. It is important for us that users receive the right tool in the right moment at the right place. And all this without any compromise with respect to quality.

STAINLESS STEEL PRO QUALITY

RUST
DOESN'T
STAND A
CHANCE

Features

- Stainless steel.
- Quick lock attachment.
- Optimum corrosion protection.

Benefits

- No risk of external rust.
- External rust on stainless steel is the result of abrasion when tightening screws using ordinary steel tools. The material which wears off such tools comprises steel particles adhering to the screws and are transformed, in the presence of oxygen, into rust. The use of stainless steel bits prevents the formation of external rust on stainless steel screws or stainless steel surfaces.
- Quick lock attachment for optimum holding in the chuck.
 - Fully compatible with PZ, PH, T, SL type screw.

ZERO RUST

BITHOLDER

TOP QUALITY

BIG II

HIGHLY EFFICIENT

Firm connection between the screw and the magnetic holder.

Screw fastening becomes highly efficient, as the screw is firmly held.

Insert the bit, the bit is held on the magnet and is retained.

Actuate the guide sleeve until the annular magnet is in contact with the screw head; almost any bit dimension can be used (Ph / Pz / Torx®).

The surface of the screw head is held on the annular magnet incorporated in the sleeve.

The screw is safely held and tilting or slipping is almost impossible.

The screw has virtually become one with the magnetic holder.

The screw is retained on the BiG magnetic holder with a force of more than 1 kg.

FOX II

FASTER

Quick change in one-hand operation.

Fox II bitholder allows the insertion of the bit without retracting the sleeve.

In order to remove the bit, the sleeve is slightly pulled backwards, and the bit will "jump" out of the holder and can be taken out without any effort.

Thus, FoX II enables rapid bit change in one-hand operation. With the aid of the neodymium magnet and a retaining pin a safe clamping is achieved. As a result the bit is "locked" in the holder and unintentional slipping out or becoming jammed in the screw is prevented.

BIG & BIG MINI

SCREW DEEP ADJUSTMENT

Ideal for: Joinery and carpentry, door and window installation, interior works (sandwich type plaster boards and hard particle boards).

SPACER

STOPVIS

The spacer ring and depth adjustment limit the penetration of the screw in the material.

The screw is perfectly in line with the material which is not damaged for a perfect finish.

BITHOLDER INDUSTRY

**STRONG
RESISTANCE
TO TORSION**

**EXCELLENT
CONCENTRICITY**

Features

- Cold forging process.
- High grade Stainless steel (according to DIN 7427).
- Bit holding ring (according to model).
- Magnetic or non magnetic according to needs.

Benefits

- Compatible with 1/4" Hex, 5/16" Desoutter, 7 mm Fein, 5,5 mm Bosch, 10 mm SDS-PLUS shanks.
- Magnetic option for holding the screws.
- Ring option for strongly holding the screw bits.
- Quick lock option.
- Ideal for hard-to-reach areas, with longer lengths (up to 250mm).

FORGING TECHNOLOGY

Using the cold forging process which we developed ourselves, standard bitholders are manufactured fully automatically. Firstly, the stainless steel sleeves and the drive sections made from high-grade tool steel are connected.

By applying this process, a positive high-quality and inseparable connection of both components is achieved. In this working step, the material on the drive side is compacted. This leads to an **increase in the strength**, which is responsible for the **long service life** of the magnetic bitholders.

This process **guarantees excellent concentricity**. During the next step, the inner profiles of our bitholders are prepared, also using the cold forging process. During this step, the material is formed around a mandrel. With this method, a wide range of dimensions can be produced, thanks to the high level of flexibility in matching changing geometries. The required strength increase is reached with the final compacting step.

BITHOLDER BIG II

SCREW
FIRMLY HELD
ON THE BIT
THANKS TO
ADDITIONAL
RING MAGNET

Features

- Automatic adjustable magnet.
- Double permanent magnets at the bottom and exit of the bit holder (ring magnet).
- Quick lock system to hold all standard bits.
- Cold forging process.

Benefits

- Effective holding of screws with powerful magnets.
- Ideal for long screws.
- Ideal for horizontal and vertical works.
- Quick release and fast bit change.
- Very high torsion resistance.
- Quick and precise manipulation with just one hand.
- Quick lock attachment for optimum holding in the chuck.

OF THE BITS**

Features

- Quick lock system to release the bits.
- Permanent magnet.
- Cold forging process.

Benefits

- Quick and easy manipulation with just one hand.
- Very high torsion resistance.
- Quick lock attachment for optimum holding in the chuck or SDS-plus.
- Magnetic for handling the screws.

BIG & BIG MINI

IDEAL FOR
PLASTER
BOARDS

Features

- Permanent magnet.
- Depth adjustable system.
- Cold forging process.

Benefits

- Screw deep adjustment according to the job.
- Ideal for: Joinery and carpentry, door and window installation, interior works (sandwich type plaster boards and hard particle boards).
- Effective holding of screws with powerful magnets.
- Ideal for long screws.
- Quick lock attachment for optimum holding in the chuck.
- BIG is suitable with PH2, PH3, PZ2, PZ3, T 15 to 30.
- BIG Mini is suitable with PH1, PZ1, T10".

BITHOLDER COPPER BERYLLIUM

FOR VERY
HIGH TORQUES
NON-SPARKING

Features

- Cold forging process.
- Specially hardened sleeve material.
- High grade Copper Beryllium steel.
- Permanent magnet.

Benefits

- High strength and wear resistance.
- Especially suitable for industrial screw connections and screw connections with very high torques or load peaks.
- Compatible with 1/4" Hex, 5/16" Desoutter, 7 mm Fein, 5,5 mm Bosch shanks.
- Magnetic option allows to hold the screws.

SCREW EXTRACTOR

SCRIBING IRON

Features

- Forged tool.
- High-quality vanadium chromium steel.
- Reversed pitch: left-hand pitch.
- Polished finish.
- Square shank.

Benefits

- Ideal for removing screws with broken or damaged heads.

Advices

- Drill the broken screw with the HSS-C 5% cobalt (731-700) or HSS G3 (702-703).
- For the tool holder, use an adjustable tap wrench (part no. 827); use an adjustable spanner for very large diameters and an open-ended spanner or a ratchet spanner for small spaces.

PRÜFGEMEINSCHAFT

The PGM is an independent body which certifies hammer and straight shank drill bits since 1978.

He stays up the standards, and, checks products and policies of quality monitoring of the manufacturers.

Drill bits have to meet the requirements of a strict specifications with the aim of allowing safe anchorings. These controls carry among others, on the diameter, the centring of the carbide tip, the straightness of drill bits. Certified drill bits are stamped with the PGM logo with the manufacturer number.

CONCRETE 3 CUTTINGS EDGES

SDS-PLUS COMPATIBLE

**DRILL
REBAR**

**DOESN'T
CRACK
CONCRETE**

Features

- Monobloc carbide tip with self-centering point.
- Tip angle 135°.
- 3 cutting edges.
- SDS-plus compatible shank.

Benefits

- The 3 cutting edges monobloc tip is the solution for all concrete drilling.
- The self-centering tip gives more precision.
- The tip design guarantees a concentric hole.
- The square flute accelerates dust extraction and improves the drill bit life time.

CONCRETE 2 CUTTING EDGES

SDS-PLUS COMPATIBLE

LONGER
LIFE
TIME

SPEED

Features

- Centring tip with "Z" geometry.
- Wave profile with 3 effective supporting points.
- The new flute offers 2 designs: half-round and square.
- SDS-plus compatible shank.

Benefits

- The 3 tips pressure points concentrate hammer force in line with the drilling axis, thus increasing speed and destructive power.
- The power of the centring tip power improves the penetration into materials, the chiselling effect, and the drilling accuracy.
- The new flute geometry optimises dust removal to guarantee speed, wear resistance, and service life.

CONCRETE 6 CUTTINGS EDGES

SDS-MAX COMPATIBLE

LONGER
LIFE TIME

AVOID
RISK OF
BLOKING

Features

- 3 carbide tips with self-centering point.
- 6 cutting edges.
- Progressive flute.
- SDS-max compatible shank.

Benefits

- Guarantee of perfect round and calibrated hole.
- Longer life time.
- No risk of blocking.

HELICAL POINTED CHISEL

FLAT CHISEL

Features

- Helical working head.
- 4 unblocking cutting edges.
- Finish : sandblasted.
- SDS-plus / SDS-max compatible.

Benefits

- **EFFORTLESS DRILLING** : Due to its helical head, the pointed chisel penetrates and explodes easily more materials. The user's efforts are minimised in comparison to a classic head form. User comfort is improved.
- **ANTI-LOCK** : The new helical working head works in half rotation with constante pressure on its 4 cutting edges. Due to its guide and specific geometry which air and dust removal during drilling, it doesn't lock into materials.
- **100% POWERFULL** : High temperature heat treatment under controlled atmospheric conditions provides maximum strength which concentrates all the hammer power for a real chiseling performance.

PREMIUM STEEL AND CARBIDE FROM GERMANY

95% of the steels and carbide tips come from Germany which guarantee a very high level of quality. The premium standards for steels and carbide tips, combined with a thermal treatment under controlled atmosphere, guarantee the best striking force restitution for our drill bits.

CONCRETE DRILL BIT PRO

FAST

Ø Max 12.7

Features

- Carbide tip with semi-positive sharpening.
- Double-rolled thread flute with land.
- Sandblasted finish.
- Straight shank.

Benefits

The head design increases the drilling speed.

SPECIFIC GLASS & TILE DRILL BIT

FAST

Ø Max 12.7

Features

- New harder carbide grade - Made in Europe.
- 4 sided design "diamond style" with aggressive cutting edges.
- Copper past brazing.
- Fast spiral with tightened pitch.
- Total length improved.
- Shiny / copper finishing.

Benefits

- Agressive tip improves precision and penetration.
- Drilling through up to class 3 ceramic tiles.
- Use dry for easy work.
- Better resistance to high temperature when drilling.
- Speed up dust extraction.
- Ideal for deep materials.
- Whirlwind effect : help to cool down the drill bit.
- Suitable for more materials : non-tempered glass, plastic, composite, brick, marble.
- Identifying design.

HSS DRILL BIT

HSS-CO COBALT 5%

Ø Max 12.7

EFFICIENT

Features

- Fully ground drill bit 5% cobalt HSS-E.
- 135° tip angle.
- Split point.
- Flute type N.
- Diameter tolerance h8

Benefits

- Starting precision.
- The cobalt content makes the bit harder and heightens temperature resistance, for work with hard metals such as stainless steel.

Applications

- Unalloyed and alloyed steels (up to 1200N/mm²), stainless steel, cast iron.
